Acoustic material

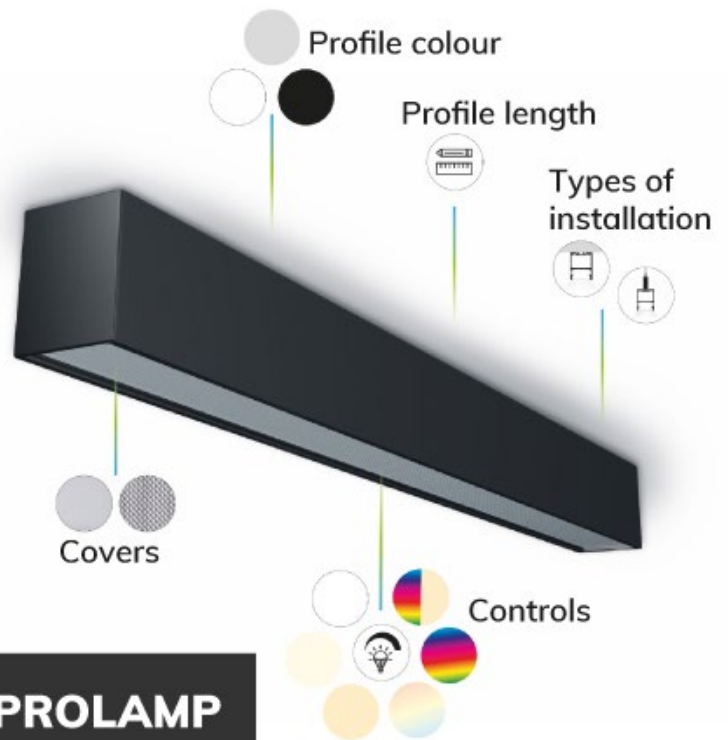

The acoustic panels from ISOLED are made of advanced, noise-absorbing material made from 100 % recycled polyester fibers. Depending on how they are installed, the acoustic panels achieve a very high sound absorption value.

Combine modern lighting profiles and acoustic elements for optimal lighting and pleasant sound absorption.

Whether in the office, hallway, canteen or living area, our lighting profiles and acoustic lights are extremely versatile.

Track48 luminaire frame with infrared heating panel.
The highly efficient hybrid solution for heating AND lighting.
 Based on the components of our Track48 mounting range, this frame offers maximum flexibility for your lighting design, as all luminaires in the series can be used without any problems. In combination with our IR heating panels, this system offers a perfect symbiosis of light and heat, creating a holistically pleasant atmosphere.

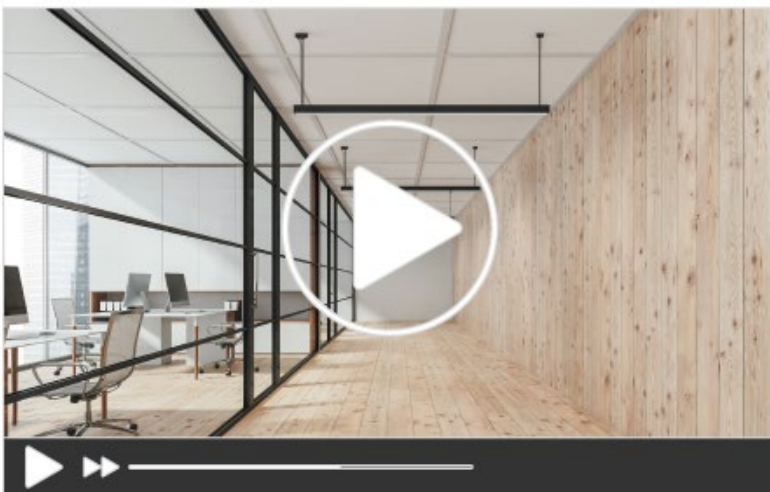

PROLAMP

The **individually configurable ProLamp luminaire profiles** score points for their versatile applications.

Whether surface-mounted or pendant luminaires, with indirect light or state-of-the-art controllers, you have complete design freedom.
