

FLEX-COVERS TWIST+BEND

Our new Flex covers Twist+Bend can be installed in and on countless surfaces, such as wooden strips and panels, plasterboard, tiles, stone, granite and much more.

The flexibility of the covers enables a variety of lighting concepts as they can also be used on curved and arched surfaces. The silicone covers are perfect for milling into wood and other materials.

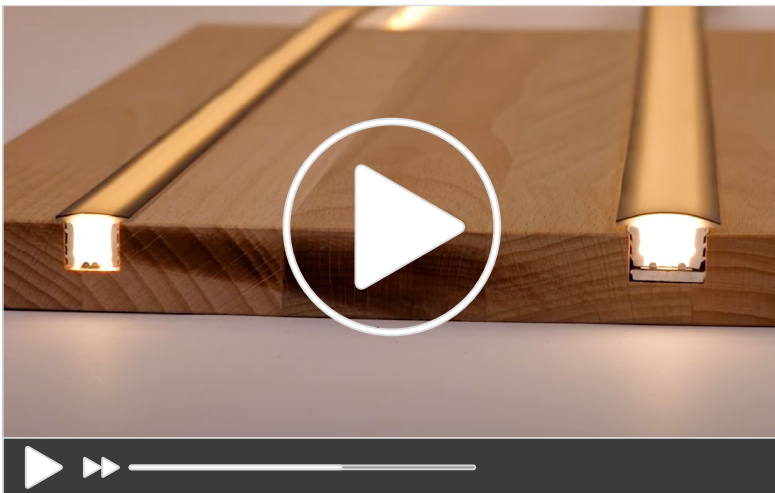

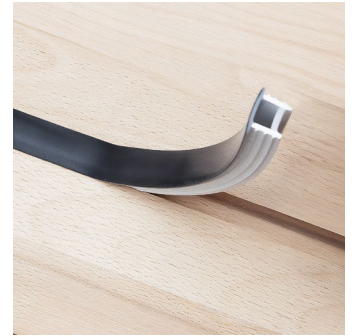

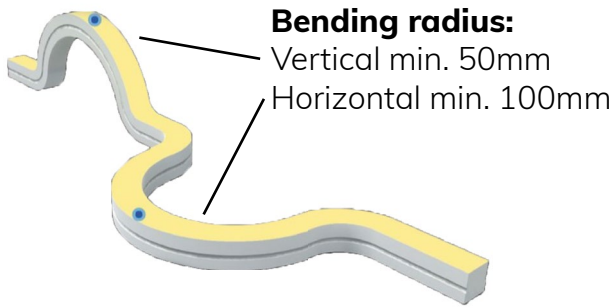

When installing an LED flex stripe with more than 5W/m, an aluminum cooling profile like our cooling strip or the profiles SURF10 and SURF16 need to be used.

FLEX-COVERS TWIST+BEND

The Flex covers can be customized to the desired length up to a maximum of 20m. We will be happy to make the desired customization for you.

	Flex-Cover10		Flex-Cover16
